Batten Car Systems

NautosTM

WHAT IS A BATTEN CAR SYSTEM?

It is a system composed of tracks and cars fixed to the mast, which significantly reduces the effort needed in raising (lifting) and lowering the main sail.

WHY USE BATTEN CARS?

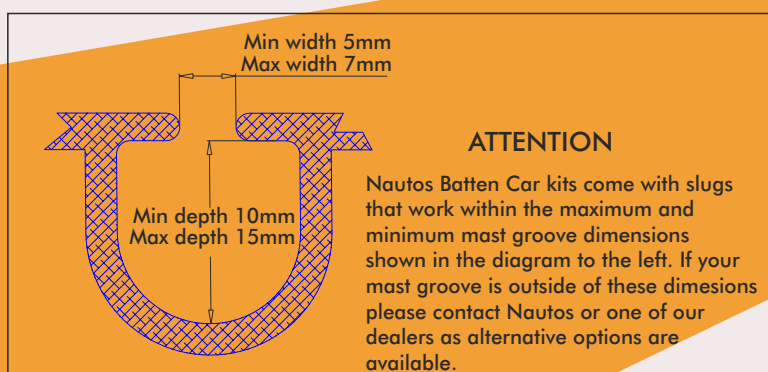

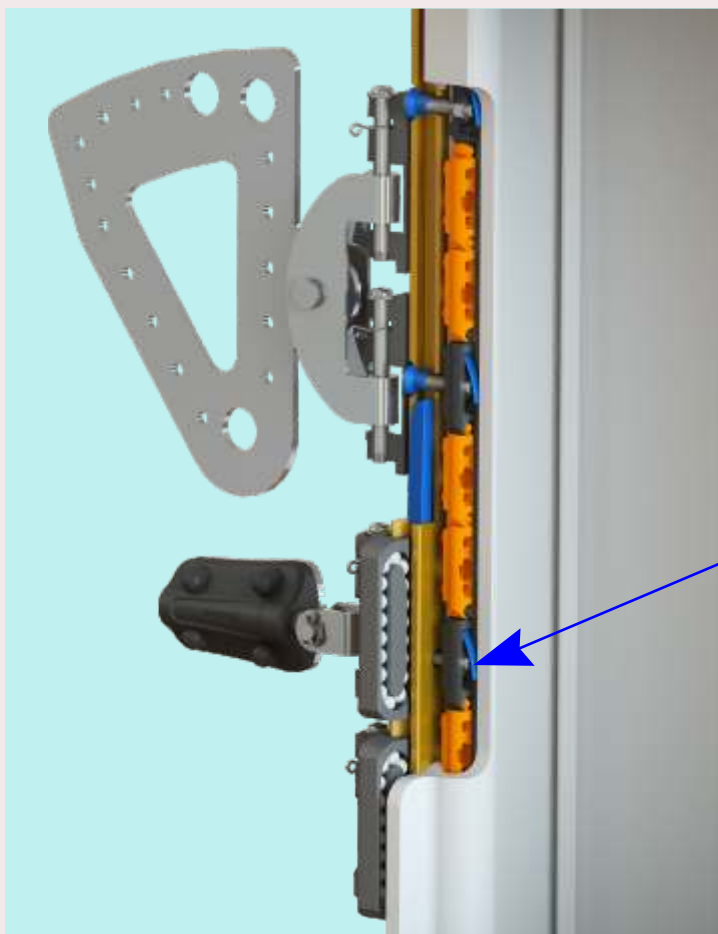

The time spent in the operation of raising and lowering the main sail is reduced and the work made much simpler.

Another important aspect is that the batten car system helps and gives more safety in critical moments, when it is necessary to reef the main sail.

WHAT IS THE NAUTOS BATTEN CAR ADVANTAGE?

The Nautos batten car system's greatest advantage is the possibility of assembling it with the mast in up, allowing the assembler a fast and cheap service.

The plastic (patented) slugs are designed in a way that maintains the slugs in the correct positions which allows easy fixing of the track.

For complex assemblies like batten cars, we recommend installation by specialised personal however it is possible to do it following the instruction manual.
